DETAILED ACTION

Drawings

 The drawings, Fig. 1 – 5, are objected to because worded labels are needed to describe each part of the invention within each of the admitted figures. For example, Fig. 1, label 16, should contain a worded label such as "digital filter".

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer

Application/Control Number: 10/003,065 Page 3

Art Unit: 2634

program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or

REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)

- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).
- Proper declaration of what is claimed must be determined before the claims are mentioned. It is suggested that the term "What is claimed:" be inserted before claim 1 and after the end of the specification on page 3.

Claim Objections

- 4. Claim 2 is objected to because of the following informalities:
 - a. Claim 2, line 18, the use of "wherein" in place of "which" should be used to clarify that the timing error signal is part of the variable delay means.

Appropriate correction is required.

5. Claim 9 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claims 7 and 8. See MPEP § 608.01(n). Accordingly, claim 9 has not been further treated on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over El-Tarhuni et al (US Patent No.: 6201828), Rademacher (US Patent No.: 6570918) and in view of Kansakoski et al (International Publication: WO 01/05052 A1).
 - a. Claim 1, El-Tarhuni et al discloses a receiver with a signal processing means comprising a variable delay (label 102), a correlation means for correlating the delayed signal with a PN code. Although El-Tarhuni et al does not disclose a code generation means for generating a filtered pilot code, Kansakoski et al. discloses a filtered pilot channel psuedonoise sequence for each finger within a rake receiver. It would be obvious to one skilled in the art to replace the PN generator disclosed by El-Tarhuni et al to allow phase offsets to be detected by a receiver to synchronize the timing of sampling the input signal with the internal clock. Although El-Tarhuni et al and Kansakoski et al does not disclose an analog-to-digital converter (A/D), combing means and a recovering data means, Rademacher discloses an A/D (label 20), a combing means (label 32) and a recovering means, in the form of a threshold device (label 34), for recovering symbols from the combined outputs, which produces a final decision on the data symbol. It would be obvious to one skilled in the art to add these

Art Unit: 2634

functions to the invention provided by El-Tarhuni et al to transfer an analog signal to digital so to process the information received and output symbols recovered from the received signal.

Page 5

Allowable Subject Matter

7. Claims 2-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Linda Wong whose telephone number is 571-272-6044. The examiner can normally be reached on 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on (571) 272-3056. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
